ZBIRNI STRUJNI TRANSFORMATORI

Namijenjeni su za zbrajanje više sinhronih struja iste faze, pri tome sekundarna struja glavnih transformatora mora biti jednaka nazivnoj struji pripadajućeg primarnog kruga zbirnih transformatora.

Detaljnije...

SUMATION CURRENT TRANSFOMERS

The sumation current transformers are used to summatize synchronous alternating currents of the same phase.
The rated secondary current of the main transformers must be the same as the rated primary current of the summation transformer.

Details...

ZBIRNI STRUJNI TRANSFORMATORI
SUMATION CURRENT TRANSFOMERS
TIP / TYPE **SCT1**

Strujni transformator za mjerenje / Measuring current transformers		
Broj primarnih krugova	3	No. of primary circuits
Nazivni teret (VA)	5/10	rated burden (VA)
Klasa točnosti	0,5/1,0	Accuracy class

TIP / TYPE **SCT2**

Strujni transformator za mjerenje / Measuring current transformers		
Broj primarnih krugova	6	No. of primary circuits
Nazivni teret (VA)	10/15	rated burden (VA)

Klasa točnosti	0,5/1,0	Accuracy class

Podaci za naručivanje	**To place an order state the following data**
- prijenosni omjeri glavnih transformatora	- current ratio of main transformers
- sekundarnu struju zbirnog transformatora	- rated secondary current of summation transformers
- snagu	- rated burden
- klasu točnosti	- accuracy class
